The Principal Officer / Head of Department

Dear Sir/Madam,

RE: INTRODUCING SkyTOP CONSTRUCT® PLATFORM AT YOUR INSTITUTION

Today's 'World of Work' has undergone radical changes. The emergence of new technologies, global markets for products and services, and international competition require economies to upgrade and enhance the skill level of their human resources. As a result, Technical and Vocational Education and Training (TVET) systems all over the world are constantly seeking ways on how to respond to the demand of a skills-based economy.

In line with this reality, it is therefore my pleasure to introduce to you our latest technology-driven innovation which seeks to automate the dissemination and sharing of knowledge and skills in your institution and the industry across the globe.

The AI-driven technology not only enhances the equipping of your students with relevant skills and knowledge for their survival upon leaving your institution but also generates revenue for your institution while also enhancing peer-to-peer engagements worldwide.

Through the SkyTOP Construct Platform, your programmes are not only seamlessly linked with other local and international institutions offering similar curricula but also with the relevant sectors that seek to benefit from the programmes that you offer. This will see your esteemed institution break the boundary barriers and become a truly global training centre that produces quality manpower for both local and international markets.

Further, through the SkyTOP Construct Platform, trainers are liberated from the repetitive task of recycling training material year after year for use by students in your institution. They are now only required to upload their training material on the Platform which the target audience both within and without your institution then access and benefit from at any time from anywhere in the world. This means your trainers now have adequate time to focus on building new training materials which match the ever-changing industry needs.

The uniqueness of SkyTOP Construct lies in its parametric capabilities. This capability ensures the training material such as demo videos, images and instructions that a trainer uploads on the Platform are all interlinked thereby ensuring trainees have a holistic knowledge of the subject matter.

To benefit from this technology, trainers and lecturers in your institution only need to sign up on the Platform and upload their programmes by following the instructions provided in the downloadable user guide which they can access on our website: www.demoscad.net. or click on this link: <https://demoscad.net/demoscad/skytop/portal/user/Signup> to

Thank you.

Thank you.

Sincerely yours

Paniel Mwaura

Chief Executive Officer / President
